## Abstracts

According to our (Global Info Research) latest study, the global Aerial Survey market size was valued at US\$ 7880 million in 2025 and is forecast to a readjusted size of US\$ 9655 million by 2032 with a CAGR of 3.0% during review period.

This report focuses on Aerial Survey Services market. Aerial survey is a method of collecting geomatics or other imagery by using airplanes, helicopters, UAVs, balloons or other aerial methods. Typical types of data collected include aerial photography, Lidar, remote sensing (using various visible and invisible bands of the electromagnetic spectrum, such as infrared, gamma, or ultraviolet) and also geophysical data (such as aeromagnetic surveys and gravity. It can also refer to the chart or map made by analysing a region from the air. Aerial survey should be distinguished from satellite imagery technologies because of its better resolution, quality and atmospheric conditions (which can negatively impact and obscure satellite observation).

In the Japanese market, the core manufacturers of aerial survey include Kokusai Kogyo, Pasco, Asia Air Survey (AAS) and Zenrin. The top three manufacturers account for approximately 95% of the Japanese market.

In terms of product type, unmanned aerial surveying occupies a dominant position, accounting for 77% of the market share. At the same time, in terms of application, construction is the largest application field, accounting for 28%.
