Abstracts

AWP is a mechanical device used to provide temporary access for people or equipment to inaccessible areas, usually at height.

Scope of the Report:

They are generally used for temporary, flexible access purposes such as maintenance and construction work or by firefighters for emergency access, which distinguishes them from permanent access equipment such as elevators. They are designed to lift limited weights — usually less than a ton, although some have a higher safe working load (SWL) — distinguishing them from most types of cranes. They are usually capable of being set up and operated by a single person. Regardless of the task they are used for, aerial work platforms may provide additional features beyond transport and access, including being equipped with electrical outlets or compressed air connectors for power tools. They may also be equipped with specialist equipment, such as carrying frames for window glass. Underbridge units are also available to lift operators down to a work area. The worldwide market for Aerial Work Platform Rental(AWP) is expected to grow at a CAGR of roughly xx% over the next five years, will reach 15600 million US\$ in 2023, from 15600 million US\$ in 2017, according to a new GIR (Global Info Research) study.

This report focuses on the Aerial Work Platform Rental(AWP) in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.
