According to our (Global Info Research) latest study, the global Aerobic Biochemical Treatment Unit market size was valued at US\$ 357 million in 2025 and is forecast to a readjusted size of US\$ 614 million by 2032 with a CAGR of 8.3% during review period.

An Aerobic Biochemical Treatment Unit is a system that uses aerobic microorganisms in oxygen-rich environments to degrade and remove organic matter, nitrogen, phosphorus, and other pollutants from wastewater. Core components include aeration tanks, sedimentation tanks, recirculation systems, and auxiliary control devices. By providing adequate oxygen and optimal biological conditions, microorganisms efficiently metabolize organic pollutants into carbon dioxide, water, and biomass while partially removing nitrogen and phosphorus. This unit is widely applied in municipal sewage, industrial wastewater, and urban effluent treatment, forming a critical part of modern wastewater treatment processes.

Aerobic Biochemical Treatment Units are evolving toward higher efficiency, energy savings, intelligence, automation, and resource recovery. With increasing urban wastewater volumes and stricter discharge standards, future units will integrate advanced aeration techniques, microbial enhancement, intelligent monitoring, and automated control to optimize energy use, reduce chemical consumption, minimize sludge production, and enable by-product recovery. IoT, digital twin technology, and remote operation will become key upgrade directions, improving operational efficiency, wastewater treatment quality, and promoting the intelligent development of municipal and industrial wastewater facilities.
