Abstracts

The global Aeroengine High Speed ??Solenoid Valve market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The development of electromagnetic valves began in the late 1950s abroad, but before 1975, it was limited to laboratory research. Since the introduction of high-speed solenoid valves in the 1970s, many manufacturers and companies at home and abroad have competed to develop many types and structures. The research and application of high-speed solenoid valves has become an important topic in the hydraulic industry. Compared with foreign countries, the development and research of high-speed solenoid valves in China started relatively late. Research on high-speed solenoid valves began in the late 1980s, and the work carried out can be roughly divided into two aspects. On the one hand, it is to track foreign research and explore the basic theory of electromagnetic valves achieving rapid response; On the other hand, it is the independent or cooperative development of high-speed solenoid valve prototypes and their supporting drive control devices.

The high-speed solenoid valve of aero-engine is an electronic control part of aero-engine. In engineering application, two kinds of driving methods, fixed frequency and variable frequency, are usually used. Its basic working state is: the valve is fully open or the valve is fully closed. By changing the ratio of the valve fully open time to the valve fully closed time in the 'unit time', the medium throughput in the 'unit time' can be controlled.
