Aerogel for EV refers to the use of aerogel materials in the manufacturing of electric vehicles (EVs) to provide insulation and improve energy efficiency. Aerogel blankets, which are thin and lightweight, can be used to insulate EV battery packs, as well as other components such as the power electronics, motor, and thermal management system. The aerogel helps to reduce heat loss and increase the efficiency of the battery system, which can result in longer range and extended battery life for EVs. The market for aerogel for EV is expected to grow as the demand for more efficient and longer-range electric vehicles continues to increase.
