According to our (Global Info Research) latest study, the global Aerogel Ceramic Fiber Mat market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Aerogel ceramic fiber felt is a flexible thermal insulation felt made of nano-silicon dioxide or metal aerogel as the main material, and is composited with reinforcing fibers such as ceramic glass fiber wool or pre-oxidized fiber felt through a special process. This material not only inherits the extremely low thermal conductivity and excellent thermal insulation performance of aerogel materials, but also combines the high temperature resistance, corrosion resistance, light weight and flexibility of ceramic fibers. Aerogel ceramic fiber felt has extremely low thermal conductivity within a specific temperature range and is an excellent thermal insulation material. Due to the addition of ceramic fibers, the material can withstand higher temperatures and is suitable for thermal insulation in high temperature environments.

Aerogel ceramic fiber felt has extremely low thermal conductivity, and its thermal insulation effect is 2 to 5 times that of traditional thermal insulation materials. It can effectively reduce the thickness of the insulation layer and improve energy utilization efficiency. This material is relatively hydrophobic and can effectively prevent moisture from entering the battery core to protect the safety of the battery. Aerogel ceramic fiber felt is light and easy to cut, which is convenient for transportation, installation and use, reducing costs. In summary, the aerogel ceramic fiber felt market is in a rapid development stage and will continue to maintain a strong growth momentum in the future.
