Abstracts

The global Aerogel Blanket for EV market size is expected to reach \$ 852.5 million by 2029, rising at a market growth of 30.9% CAGR during the forecast period (2023-2029).

Global Aerogel Blanket for EV core manufacturers mainly include Aspen Aerogel, Nano Technology, Guangdong Elixir Hi-Tech, and Audemars Piguet,ect, with the top three manufacturers holding about 55% of the market share. China is currently the largest production region, with a market share of over 70%, and North America is also an important production region. The conventional thickness of aerogel felt is 0.5/1/2/3/6/10, of which 2mm and 3mm are the mainstream specifications for current applications. The product is mainly used in the automotive industry, including passenger cars and commercial vehicles.

Aerogel blanket is a flexible, high-efficiency thermal insulation felt that combines nano-aerogel with inorganic fibers and is specially used for power battery modules. The main characteristics of Aerogel felt are low thermal conductivity, and the thermal insulation effect is 2 to 5 times that of traditional insulation materials, which can effectively reduce the thickness of the insulation layer. Secondly, Aerogel felt is relatively hydrophobic, which can effectively prevent moisture from entering the inside of the battery core. ; In addition, Aerogel felt is light and easy to cut, which greatly reduces transportation, installation and use costs. SiO₂ Aerogel felt composite material is reinforced by introducing pre-oxidized fiber filaments, glass fiber, ceramic fiber, carbon fiber and other base materials into the SiO₂ Aerogel manufacturing process. After die-cutting, coating and other processing processes, it is finally made into the battery core. used during the period. Processing and coating mainly prevents fiber dust from falling from the Aerogel product during vehicle driving.
