## Abstracts

Aeronautic Propeller converts rotary motion from an engine or other power source, into a swirling slipstream which pushes the propeller forwards or backwards.

Scope of the Report:

This report focuses on the Aeronautic Propeller in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

There is a huge demand for the aeronautic propeller market in the developing countries because of the increasing demand of the aircraft in these regions.

Propellers are only suitable for use at subsonic airspeeds up to around 480 mph (770 km/h), as above this speed the blade tip speed approaches the speed of sound and local supersonic flow causes high drag, noise and propeller structural problems.

The worldwide market for Aeronautic Propeller is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
