## Abstracts

According to our (Global Info Research) latest study, the global Aeroponic System market size was valued at US\$ 1543 million in 2024 and is forecast to a readjusted size of USD 3361 million by 2031 with a CAGR of 11.7% during review period.

An aeroponic system is a type of soilless agriculture where plants are grown in an air or mist environment without the use of soil or an aggregate medium like sand or gravel. Instead of using soil to provide nutrients, aeroponics relies on nutrient-rich water that is delivered in the form of a fine mist or spray to the plant roots. The plants are typically suspended in air, and the roots are exposed to this mist, which provides water, oxygen, and nutrients necessary for growth.
