Abstracts

Aeroponics is an indoor gardening practice in which plants are grown and nourished by suspending their root structures in air. The process requires regular spraying of nutrients and water solution. Moreover, it offers an efficient means to grow plants, including fruits and vegetables, without the need to pot the plants to nutrient-rich soil. The plants are suspended in an enclosed setting and water, mixed with plant food, is sprayed onto the roots. North America Aeroponics Farming Market is driven by aeroponics systems that are frequently employed in an enclosed environment such as a greenhouse so that the temperature and humidity can be accurately regulated.
