Abstracts

The aerosol continuous monitor is a device that monitors aerosol particles in the air in real time. It removes particles through air filters, then uses optical sensors to detect aerosols and sends the data to the host computer for real-time monitoring. This instrument is widely used in environmental monitoring, scientific research, and air quality control. In addition, the aerosol continuous monitor can also be networked through a wireless gateway to achieve remote monitoring and data transmission, improving the security of data transmission and the flexibility of monitoring.
