## Abstracts

According to our (Global Info Research) latest study, the global Aerosol Deposition market size was valued at US\$ 33.79 million in 2025 and is forecast to a readjusted size of US\$ 60.17 million by 2032 with a CAGR of 8.7% during review period.

Technology of forming a high-density coating film without pores by colliding fine powders of ? to ? size to the surface of products under vacuum at very high speed without any melting process. The Aerosol Deposition is a new coating method based on the mechanisms of Room Temperature Impact Consolidation. A special feature and a clear advantage of Aerosol Deposition is that the coating of all material types (ceramics and metals) on all substrate types (metal, glass, ceramics and plastics) is done at room temperature and in low vacuum.
