Abstracts

The global Aerosol Fire Extinguishing Device Control Box market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The aerosol fire extinguishing device control box is a device used to control and manage the aerosol fire extinguishing system. An aerosol fire extinguishing system is a device that uses an aerosol agent to release very fine particles to suppress fires. The control box usually consists of a controller, power module, trigger, alarm, etc. The controller is the core part of the control box. It is responsible for monitoring fire status, receiving trigger signals, controlling aerosol release and alarming functions. The controller can determine whether aerosol release needs to be triggered based on preset parameters and logic, and send a signal to the aerosol generator through the trigger. The power module provides power supply to the control box to ensure its normal operation. The trigger is a device that receives the signal from a fire detector or manual trigger and passes the signal to the controller. Alarms are used to send out sound or light signals to alert people of a fire.
