Aerosols are primarily used in paints, perfumes, room fresheners, medical products deodorants in order to hold liquid droplets in pressurized form.

Scope of the Report:

This report focuses on the Aerosol in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The market for aerosols in Europe registered a share of over 32% of the demand volume in 2015 on account of growing consumption of personal care products, particularly in Germany, Spain, Italy, France, and UK. However, the presence of stringent regulations to limit VOC emissions including European Commissions' VOC Solvents Emissions Directive is expected to restrict market growth.

Increasing demand for personal care products, particularly among the male population in the UK is expected to drive demand for hair sprays, conditioners, and dry shampoos. In addition, increasing demand for male grooming products, particularly among males in the age group 18-24 in the UK, on account of lifestyle changes is likely to propel the market growth.

The industry in Central & South America is likely to be driven by the consumption of aerosol based products primarily in Brazil and Argentina. In addition, growing affinity of the consumers towards the use of advanced cosmetic products is expected to emerge as the primary growth driver over the next nine years.

The worldwide market for Aerosol is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017,

according to a new GIR (Global Info Research) study.
