Abstracts

According to our (Global Info Research) latest study, the global Aerosol Particle Sensors market size was valued at US\$ 2240 million in 2025 and is forecast to a readjusted size of US\$ 4230 million by 2032 with a CAGR of 9.5% during review period.

In 2025, global Aerosol Particle Sensors production reached approximately 4.4 million units, with an average global market price of around US\$ 500 per unit. Annual production capacity is 5.5 million units. Gross Profit Margin: 34%. Aerosol Particle Sensors are devices designed to detect, measure, and analyze airborne particles (aerosols) such as dust, smoke, pollen, droplets, and fine particulate matter (PM). The industry chain of aerosol particle sensors begins with suppliers of lasers, optical detectors, microelectronics, and housings, followed by manufacturers that design and assemble PM and aerosol sensing modules. These sensors are integrated into air quality monitors, HVAC systems, industrial safety equipment, and IoT platforms, and are finally delivered to end users such as environmental agencies, industries, healthcare facilities, and consumers, with calibration, software, and data analytics services supporting operation and accuracy. Aerosol particle sensors are increasingly essential tools for making invisible air pollution visible and actionable.
