Abstracts

The global Aerospace Fasteners market size is expected to reach \$ 5032 million by 2029, rising at a market growth of 3.4% CAGR during the forecast period (2023-2029).

Global key players of aerospace fasteners include Precision Castparts Corp, Howmet Aerospace and LSI Aerospace. Global top three manufacturers hold a share about 76%. In terms of product, threaded fasteners is the largest segment, with a share about 83%. And in terms of application, the largest application is civil, which has a share about 85 percent.

Aerospace fasteners are the hardware components or devices that are used to mechanically combine two or more objects together or to connect parts of an aircraft during aftermarket servicing and original equipment manufacturing. Aerospace fasteners are durable and secure and aid in enhancing the aircraft's efficiency while reducing its overall weight. They are commonly manufactured using aluminum, titanium and steel, owing to the high tensile/shear strength and corrosion resistance of these metals. These fasteners are used for creating non-permanent joints that can be dismantled or removed without damaging the surrounding equipment. Owing to this, they find extensive applications in assembling commercial and military aircraft, rockets, ballistic missiles and satellites.
