Abstracts

Flight control system is design to facilitate the better aircraft maneuverability. It includes control surface, cockpit controls, linkage connection, aircraft engine controls, and other required equipment to control the direction of aircraft. It is designed in such a way to exert force in different directions and generate a force that change the direction of aircraft. Modern aircraft have replaced heavier and slower mechanical flight systems with electro-mechanical flight control systems that consist of electronically generated signals.

SCOPE OF THE REPORT:

This report focuses on the Aerospace Flight Control System in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The flight control computer interprets signals from the pilot's yoke and then provides electronic commands to the actuators to move the control surfaces. This not only improves airplane performance, ensuring a smoother ride in turbulent weather, but it also reduces weight and is easier to maintain. The rise in popularity of unmanned aircraft and lightweight aircraft in aircraft applications is expected to drive the market during the forecast period. However, there are some shortcomings in the operating performance of the flight control systems, such as difficulty in achieving interoperability among so many different systems and technologies.

The worldwide market for Aerospace Flight Control System is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
