Abstracts

Aerospace foams are manufactured using various materials such as polyurethane (PU) foams, polyethylene (PE) foams, metal foams, melamine foams, and other types of foams, including polyvinylidene fluoride (PVDF), polyphenylsulfone (PPSU), silicones, polyetherimide (PEI), and polymethacrylimide (PMI). These foams are used in various applications such as seating, gaskets, seals, carpet pads, rotor blades, headrest, doors, windshields, cockpit instrument panel, and wingtip lens. The aerospace foam market is segmented in different end-use industries, which include commercial aircraft, general aviation, and military aircraft. All these foams maintain performance through high temperature, reducing air leakage, providing sound barriers, and superior temperature insulation performance.

According to our (Global Info Research) latest study, the global Aerospace Foam market size was valued at USD 4661.1 million in 2022 and is forecast to a readjusted size of USD 6141.6 million by 2029 with a CAGR of 4.0% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

North America is the biggest market of aerospace foams. Among all the countries, the U.S. dominates the aerospace foams market, which accounted for the maximum market share in 2017 closely followed by China. Polyurethane foams are the largest material type of aerospace foams in terms of volume followed by metal foams. The European market is comparatively mature with a consumption growth rate well below the average market growth.
