According to our (Global Info Research) latest study, the global Aerospace Galley Trolley and Container market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

An aerospace service trolley is also known as airline meal trolley, airline catering trolley, or trolley cart is a little cart stashed up by an air carrier for operating by the cabin crew members inside the aircraft for passenger service by food, beverages and other items for the duration of a flight. Containers and trolleys used in the commercial aircrafts are believed as a division of aircraft galley, mainly understood by the umbrella term galley inserts. Small storage boxes as cabins are fixed in the airplane galley for storing up small items, for example, ice and food among others whereas trolleys are used to deliver the food and beverages to the passengers inside the aircraft cabin. The galley is the compartment of an aircraft where food is prepared and cooked. This might also signify or represent a particular design of a household kitchen or to a land-based kitchen on a naval base.

It is a well-known fact that commercial aircrafts that are used to transport passengers have become, in the current scenario, much more than a vessel to get from one point to another. Airline carriers continuously modify the interiors of their aircraft fleet so as to provide utmost luxury and comfort to their passengers without compromising on ticket prices. This dynamic change has brought in more passengers to opt for air travel than other means of transport resulting in high growth witnessed in the number of passengers on a yearly basis. The airline industry has become a very competitive industry with numerous airline carriers entering the market – in particular the low-cost airline carriers offering cheap flights with improved cabin comforts. These factors have

led to an increase in the number of orders the airline carriers place for aircrafts to the OEMs. Similarly, these factors have also led the manufacturers of trolleys and containers to ramp up their production thereby increasing the supply as per the demand generated by the airline industry. With an uptick witnessed in air travel, bottlenecks have been observed in the aircraft manufacturing industry with the production output unable to meet the demands placed by the airline carriers leading to backlogs and delays in the deliveries of new aircraft.
