Abstracts

Landing Gear is the undercarriage of an aircraft or spacecraft and may be used for either takeoff or landing.

According to our (Global Info Research) latest study, the global Aerospace Landing Gear market size was valued at USD 10090 million in 2022 and is forecast to a readjusted size of USD 13380 million by 2029 with a CAGR of 4.1% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

For aircraft, the landing gear supports the craft when it is not flying, allowing it to take off, land, and taxi without damage. Wheels are typically used but skids, skis, floats or a combination of these and other elements can be deployed depending both on the surface and on whether the craft only operates vertically (VTOL) or is able to taxi along the surface. Faster aircraft usually have retractable undercarriages, which fold away during flight to reduce air resistance or drag.
