According to our (Global Info Research) latest study, the global Aerospace and Defense Telemetry market size was valued at USD 16480 million in 2023 and is forecast to a readjusted size of USD 21160 million by 2030 with a CAGR of 3.6% during review period.

Telemetry is the measurement and wireless data transmission of data from remote sources. Sensors measure physical data or electrical data that are converted into specific electrical voltages. Multiplexers combine these voltages with timing data into a single data stream for transmission to a remote receiver. At the reception, the data stream is separated into its original components and the data is displayed and processed according to user specifications.
