Abstracts

The global Aerospace NDT Inspection Solution market size is expected to reach \$ 346 million by 2032, rising at a market growth of 5.1% CAGR during the forecast period (2026-2032).

To address the challenges of difficult-to-detect internal defects in aerospace components, the destructive nature of traditional inspection methods, and the urgent need for full-lifecycle safety monitoring, aerospace non-destructive testing (NDT) solutions have emerged. Since its systematic development in the mid-20th century with the rise of the aerospace industry, this technological field has continuously achieved significant breakthroughs. Currently, aerospace NDT solutions have evolved into a comprehensive system integrating various advanced methods such as ultrasound, X-ray imaging, infrared thermography, eddy current testing, and terahertz technology. It is widely used in the research and development of new spacecraft materials and structures, the manufacturing of critical engine components, in-orbit spacecraft health monitoring, and maintenance and support. It can achieve precise identification and evaluation of defects ranging from microscopic material defects to macroscopic structural damage while ensuring the integrity of the tested object, providing indispensable technical support for improving the reliability, safety, and service life of aerospace equipment.

Aerospace NDT solutions are evolving from single-technology testing to intelligent full-lifecycle management. Technological breakthroughs (such as 0.1 mm precision and AI defect recognition) and industrial collaboration (such as upstream materials, midstream equipment, and downstream services linkage) are the core driving forces. In the future, focus should be placed on three main areas: standardization, engineering talent training, and adaptation to extreme environments, to support the large-scale development of commercial aerospace, the safe operation of aircraft, and the national strategy of domestic production of high-end equipment, ultimately achieving a leapfrog

upgrade from 'detection and verification' to 'quality prediction.'
