According to our (Global Info Research) latest study, the global Acute Coronary Syndrome (ACS) market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Acute coronary syndrome (ACS) is a syndrome (set of signs and symptoms) due to decreased blood flow in the coronary arteries such that part of the heart muscle is unable to function properly or dies. The most common symptom is chest pain, often radiating to the left shoulder or angle of the jaw, crushing, central and associated with nausea and sweating. Many people with acute coronary syndromes present with symptoms other than chest pain, particularly, women, older patients, and patients with diabetes mellitus.

Increase in geriatric population and rise in the incidence of cardiac disorders are the major factors that drive the market growth. However, stringent government regulations for the approval of drugs are expected to restrain the market growth. Improvement in healthcare facilities in emerging regions such as Asia-Pacific and LAMEA are expected to provide new growth opportunities for the market during the analysis period.
