## Abstracts

The global Aerospace SOI Pressure Transducer market size is expected to reach \$ 179 million by 2032, rising at a market growth of 8.5% CAGR during the forecast period (2026-2032).

In 2025, global Aerospace SOI Pressure Transducer production reached approximately 172 k units with an average global market price of around US\$570 per unit. Single-line annual production capacity averages 11 k units with a gross margin of approximately 30.5%. The upstream of aerospace SOI pressure transducers primarily involves high-purity silicon materials, insulating layer materials, and microelectronic processing technologies, focusing on the semiconductor and sensor technology fields. The downstream applications are concentrated in spacecraft (40% share), satellites and space stations (30% share), and rocket propulsion systems (30% share). The market demand for these transducers is stable and growing, with business opportunities primarily lying in the field of spacecraft precision control and propulsion systems that require high reliability.

Aerospace SOI pressure transducers are engineered with precision to meet the stringent requirements of aerospace applications, utilizing the unique advantages of Silicon-on-Insulator (SOI) technology. These transducers offer exceptional sensitivity, high accuracy, and excellent stability under the demanding conditions of high-altitude and extreme temperature variations, which are critical for reliable performance in aircraft systems. The integration of SOI with advanced microfabrication techniques allows for the creation of compact, robust, and cost-effective sensors that can withstand harsh environments, thereby providing crucial pressure data for navigation, propulsion, and other critical functions.
