Abstracts

An aerostructure is a component of an aircraft's airframe. This may include all or part of the fuselage, wings, or flight control surfaces. Companies that specialize in constructing these components are referred to as "aerostructures manufacturers," though many larger aerospace firms with a more diversified product portfolio also build aerostructures.

Scope of the Report:

This report focuses on the Aerostructure Equipment in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Aircraft production is on the rise and the demand is fueled by a number of global factors. Despite a trend towards loading efficiency, route consolidation, and the geopolitical situation of countries such as Russia resulting in some limitations, the world GDP is up and a wealthier, growing population is leading to a higher volume of flights. In the EU especially, there is higher demand for more eco-friendly and fuel-efficient aircraft, and emerging and expanding markets are supported by large investments in China and Mexico's attractive workforce.

The worldwide market for Aerostructure Equipment is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
