Abstracts

The global Aesthetic Devices market size is expected to reach \$ 30084 million by 2032, rising at a market growth of 5.2% CAGR during the forecast period (2026-2032).

Aesthetic Device is a machine used for aesthetic purposes, including shaping, whitening, removing beverage and other non-surgical operation. It can be mainly divided into medical aesthetic devices and home aesthetic devices. In recent years, with the rise of the world's per capita spending level and the proportion of people taking on medical treatment and aesthetic treatment keep growing, aesthetic devices become more and more popular.

In the future, the technological evolution of beauty equipment will be entirely centered around 'precision, multimodal integration and intelligence', presenting core trends such as integrated multi-energy source platforms (single device integrating fractional laser, radiofrequency and pulsed light), adaptive adjustment of subcutaneous dynamic impedance and temperature monitoring based on intelligent algorithms, and artificial intelligence-assisted setting of operation parameters. The aim is to minimize thermal damage during treatment and shorten the post-operative recovery period. From the perspective of market development drivers, on one hand, the global trend of population aging has led to a continuous surge in the demand for facial rejuvenation and anti-aging, with the consumption concept fundamentally shifting from 'surgical plastic surgery' to 'non-surgical light medical aesthetics' with lower risks and immediate treatment and departure. On the other hand, breakthroughs in underlying energy control technology and the development of dual-wavelength technology have made the treatment effects more significant and precise. Coupled with the stricter regulatory compliance, illegal counterfeit equipment is being rapidly eliminated, which is driving the continuous release of the demand for equipment renewal and upgrading in regular

medical institutions.
