Abstracts

According to our (Global Info Research) latest study, the global Ag Paste and Powder market size was valued at US\$ 5730 million in 2025 and is forecast to a readjusted size of US\$ 11447 million by 2032 with a CAGR of 10.3% during review period.

Ag paste is a printable/dispensable functional material where silver powder (or flakes/particles) is dispersed in an organic vehicle (binder + solvent + additives). In thick-film systems, the formulation often includes metal oxides and/or glass frit to enable adhesion and sintering during firing, forming a highly conductive silver film after drying and curing/firing.

Upstream starts from silver feedstocks (refined Ag) and powder manufacturing. Silver powder for electronics can be made by routes such as chemical reduction (common for fine particles used in metallization pastes) and other metal-powder processes; suppliers then control particle size distribution, morphology (spherical/flake/dendritic), and surface condition to tune paste rheology, packing density, and conductivity. The powder is finally compounded with the organic vehicle (and, where relevant, glass frit/oxide additives) into a paste optimized for printing, drying, and subsequent curing/sintering.

Downstream, silver pastes dominate photovoltaic (PV) metallization (screen-printed Ag compositions for front/back electrodes) and are also widely used in thick-film electronics (conductors on ceramics, LTCC/HTCC, hybrid circuits). For high-reliability power electronics, silver sintering pastes are used for die attach/interconnect, producing a “pure silver” bond line with excellent thermal and electrical performance. Silver powders/flakes are also core fillers for electrically/thermally conductive adhesives and inks, including EMI/RFI shielding materials.

In 2025, global sales of Ag Paste and Powder reached approximately 6,223 tons, with an average global market price of around US\$ 895/kg. Production capacity varies significantly among manufacturers, with gross profit margins ranging from approximately 20% to 40%.
