Abstracts

The global Agarose Magnetic Beads market size is expected to reach \$ 1238 million by 2032, rising at a market growth of 6.6% CAGR during the forecast period (2026-2032).

Agarose magnetic beads are a type of porous microsphere material formed by embedding magnetic particles into natural agarose as the matrix. The surface can be chemically modified to fix functional ligands such as Protein A, Protein G, Ni NTA, etc., thereby achieving specific binding and separation of proteins, antibodies, or nucleic acids; Under the action of an external magnetic field, solid-liquid separation can be quickly achieved without the need for centrifugation or chromatography column operation. It has the characteristics of good biocompatibility, high binding capacity, and easy operation, and is widely used in protein purification, immunoprecipitation, molecular diagnostics, and biopharmaceuticals. In 2025, global Agarose Magnetic Beads production reached approximately 14,687 ML, with an average global market price of around US\$ 52 per ML.

The agarose magnetic bead market is currently in a stable and rapid growth stage, driven by the expansion of the biopharmaceutical industry, the development of monoclonal antibody drugs, and increased investment in molecular biology and precision medicine research, resulting in a sustained increase in demand for efficient protein and antibody purification; In terms of market structure, protein and antibody purification are the largest application scenarios, accounting for about 45%, while applications such as immunoprecipitation and sample preparation are growing rapidly.

From the trend, the industry is developing towards high-throughput, automation, and high functionality. Magnetic bead materials are upgrading from traditional agarose to highly cross-linked and multifunctional modification systems to enhance binding

efficiency and stability; At the same time, magnetic bead purification is gradually replacing some traditional chromatography techniques, and the permeability in laboratory and industrial production continues to increase.
