According to our (Global Info Research) latest study, the global AGC Optical Receiver market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Automatic Gain Control (AGC) can provide a receiver with a certain dynamic range. When the optical power of the input optical receiver fluctuates, the output signal of the photodetector also fluctuates. The gain of the main amplifier is adjusted through AGC, so that the output signal amplitude of the main amplifier is not affected by the input signal within a certain range.
