According to our latest research, the global Age-Related Macular Degeneration (AMD) AI Screening System market size will reach USD 5183 million in 2031, growing at a CAGR of 79.9% over the analysis period.

Age-related macular degeneration (AMD) represents one of leading cause of visual impairment in developed countries and a major target for AI-based approaches. The analysis of AMD data is mainly based on optical coherence tomography(OCT) images; thus, image segmentation is a fundamental step for accurately recognizing retinal structures. Many unsupervised AI-based segmentation algorithms have been developed, providing very high performance in detecting retinal features. These algorithms are useful not only for assessing the integrity of retinal structures, but also for localizing and quantifying retinal fluids during follow-up.

The age-related macular degeneration (AMD) market trends are shaping the growth of the market. For instance rise in the adoption of age-related macular degeneration drugs (AMD) among the geriatric population suffering from age-related macular degeneration (AMD) drives the growth of the age-related macular degeneration (AMD) market size. For instance, according to the 2022 factsheet of World Health Organization, by 2030, 1 in 6 people in the world is projected to be aged 60 years or over, indicating a potential increase in the age-related macular degeneration (AMD) market size.
