Abstracts

The global Ageing Furnaces market size is expected to reach \$ 484 million by 2032, rising at a market growth of 3.0% CAGR during the forecast period (2026-2032).

In 2025, the global production of aging furnaces reached 59,544 units, with an average selling price of US\$6,250 per unit. The global annual production capacity of aging furnaces is approximately 90,000 units, with a gross profit margin of approximately 17.2%. An aging furnace is a furnace specifically designed for aging materials or components under specific temperature and time conditions. Aging treatment is a heat treatment process whose main purpose is to improve the mechanical properties, microstructure, stability, and reliability of materials through mechanisms such as diffusion, precipitation, and stress relaxation. The upstream of the aging furnace industry chain includes quartz glass, refractory materials, and furnace lining materials; the midstream consists of aging furnace manufacturers; and the downstream mainly includes industries such as automotive, aluminum processing, and aerospace.
