According to our (Global Info Research) latest study, the global Aggregate Mining And Mineral Processing Equipment market size was valued at US\$ 13831 million in 2025 and is forecast to a readjusted size of US\$ 20208 million by 2032 with a CAGR of 5.5% during review period.

Aggregate mining and mineral processing equipment refers to machinery and systems used for the extraction, crushing, screening, conveying, washing, and grading of aggregates and mineral materials, including stone, sand, gravel, and various metallic and non-metallic ores. These equipment sets are widely deployed in quarries, open-pit mines, sand and gravel plants, and mineral processing facilities to convert raw materials into standardized products for construction, infrastructure, and industrial use. From a value chain perspective, upstream activities include steel structures, motors, bearings, hydraulics, wear-resistant materials, and control components; midstream processes focus on equipment design, manufacturing, assembly, and system integration; downstream demand is driven by quarry operators, mining companies, construction material producers, and infrastructure contractors. In 2025, the average selling price of aggregate mining and mineral processing equipment is approximately US\$320,000 per unit, with global sales volume reaching around 42 thousand units. The industry maintains a 25%–40% gross margin, supported by equipment durability, aftermarket services, customization, and long operating lifecycles.
