The global Aggregates market size is expected to reach \$ 615450 million by 2032, rising at a market growth of 3.2% CAGR during the forecast period (2026-2032).

Aggregate is a broad category of granular materials (sand, gravel, crushed stone) sourced from pits and quarries and combined with cementitious binders (cement, asphalt) to form composite materials like concrete and asphalt . As the most mined resource worldwide, aggregates provide reinforcement, predictable load-bearing properties, and hydraulic conductivity, making them indispensable for foundations, road bases, and drainage applications . Classified by size into coarse (>4.75 mm) and fine (
