## Abstracts

According to our (Global Info Research) latest study, the global AGM Deep Cycle Batteries market size was valued at US\$ 537 million in 2025 and is forecast to a readjusted size of US\$ 865 million by 2032 with a CAGR of 6.4% during review period.

In 2025, global AGM Deep Cycle Batteries production reached approximately 4,400,000 KWh with an average global market price of around US\$ 95 per KWh, and a gross profit margin of approximately 20%-40%. AGM Deep Cycle Batteries refers to a valve-regulated lead-acid battery that uses an absorbent glass mat separator to immobilize the electrolyte and support sealed, maintenance-free operation. It is designed for repeated deep discharge and recharge cycles, providing stable power output, good vibration resistance, and lower leakage risk than flooded batteries. Deep cycle AGM batteries are widely used in renewable energy storage, RVs, marine systems, backup power, mobility equipment, and off-grid power applications where reliable cyclic performance, safety, and low maintenance are important.

The industrial chain of AGM Deep Cycle Batteries includes upstream materials such as lead, sulfuric acid, glass mat separators, battery casings, valves, plates, terminals, and charging control components. The midstream consists of plate production, AGM separator assembly, electrolyte absorption, cell formation, sealing, and quality testing. Downstream applications mainly include solar and wind energy storage, RV and marine power systems, backup power, telecom power, mobility devices, and industrial cyclic power scenarios. The ecosystem also includes chargers, energy management systems, distribution networks, recycling services, and maintenance support to improve service life, safety, and operating reliability.
