The global Agricultural Grade Glutamic Acid Homopolymer market size is expected to reach \$ 170.8 million by 2029, rising at a market growth of 4.0% CAGR during the forecast period (2023-2029).

The development trend for agricultural grade glutamic acid homopolymer is expected to be positive in the coming years. With the growing awareness about the harmful effects of chemical fertilizers and pesticides, there is a rising demand for organic and sustainable agricultural practices. Glutamic acid homopolymer, being a natural and biodegradable polymer, is considered a suitable alternative to synthetic chemicals. Its use in agriculture can help improve soil health, enhance nutrient absorption, and promote plant growth. Soil health and fertility are crucial factors for sustainable agriculture. Glutamic acid homopolymer has been found to enhance soil fertility by improving nutrient availability, water retention, and microbial activity. As farmers and agricultural experts recognize the importance of soil health, the demand for glutamic acid homopolymer is expected to increase.
