Agricultural Imaging System refers to advanced imaging equipment designed for crop monitoring, agricultural analysis, and precision farming applications. These systems integrate cameras, multispectral sensors, hyperspectral imaging technology, image processing algorithms, and data analysis platforms to capture and analyze crop growth conditions, plant health, disease status, and field environments. They are widely used in precision agriculture, crop inspection, agricultural research, and smart farming management. The product scope includes agricultural imaging cameras and integrated imaging systems, excluding general industrial imaging equipment without agricultural applications.

The industry chain of Agricultural Imaging System includes upstream optical components, midstream imaging system manufacturing, and downstream agricultural applications. Upstream suppliers provide image sensors, optical lenses, spectral modules, electronic components, and data processing units. Midstream manufacturers
