According to our (Global Info Research) latest study, the global Agricultural Insecticide market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Insecticides are substances used to kill insects.[1] They include ovicides and larvicides used against insect eggs and larvae, respectively. Insecticides are used in agriculture, medicine, industry and by consumers. Insecticides are claimed to be a major factor behind the increase in the 20th-century's agricultural productivity. Nearly all insecticides have the potential to significantly alter ecosystems; many are toxic to humans and/or animals; some become concentrated as they spread along the food chain.

On the basis of crop type, the cereals & grains segment accounted for the highest consumption of the insecticides in 2017. On a global level, the total cereal production has been increasing, and with the growth in cereal production and consumption, it has become important for producers to focus more on its yield and quality by using different insecticides.

The Global Info Research report includes an overview of the development of the Agricultural Insecticide industry chain, the market status of Cereals & Grains (Synthetic Insecticide, Natural Insecticides), Oilseeds & Pulses (Synthetic Insecticide, Natural Insecticides), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Agricultural Insecticide.
