Abstracts

Insecticides are substances used to kill insects.[1] They include ovicides and larvicides used against insect eggs and larvae, respectively. Insecticides are used in agriculture, medicine, industry and by consumers. Insecticides are claimed to be a major factor behind the increase in the 20th-century's agricultural productivity. Nearly all insecticides have the potential to significantly alter ecosystems; many are toxic to humans and/or animals; some become concentrated as they spread along the food chain.

Scope of the Report:

This report focuses on the Agricultural Insecticide in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

On the basis of crop type, the cereals & grains segment accounted for the highest consumption of the insecticides in 2017. On a global level, the total cereal production has been increasing, and with the growth in cereal production and consumption, it has become important for producers to focus more on its yield and quality by using different insecticides.

The Asia-Pacific region is projected to be the fastest-growing market for insecticides between 2018 and 2023. The Asia-Pacific market experiences the maximum consumption of insecticides due to the increasing awareness about pesticides and growing demand for crops. Key players focus on research & developments to develop products conforming to European regulations for insecticides, since these regulations are considered to be benchmarks in terms of certain insecticides.

The worldwide market for Agricultural Insecticide is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million
