Agricultural Linear Irrigation System is a mechanized irrigation system that moves in a straight line across rectangular or large-scale farmland, delivering water through sprinklers, pipes, drive towers, and control systems. It is mainly used to improve irrigation uniformity, reduce labor input, optimize water use efficiency, and support stable crop production in field farming.

The industrial chain of Agricultural Linear Irrigation System covers upstream components such as steel structures, pipes, sprinklers, pumps, motors, gearboxes, tires, sensors, control panels, and water management devices. The midstream consists of system design, frame fabrication, drive assembly, irrigation control integration, testing, and field installation. Downstream applications mainly include grain farming, forage production, vegetable cultivation, seed farms, large commercial farms, and water-saving agricultural projects.
