The agricultural machinery dispatching system is an intelligent management platform for agricultural machinery operations built upon BeiDou positioning, the Internet of Things, cloud computing, big data, and mobile internet. Through real-time collection and analysis of information such as machinery location, operating status, operating area, trajectory, fuel consumption, and faults, it achieves integrated intelligent control of unified dispatching, work assignment, route planning, quality supervision, settlement management, and data statistics. It is a core management tool for smart agricultural machinery, large-scale managed services, and socialized services.

The core functions of the agricultural machinery dispatching system include agricultural machinery positioning and monitoring with electronic fencing, intelligent work assignment and task allocation, automatic statistics of operating area, operating trajectory and quality supervision, cross-regional operation dispatching and route optimization, statistical analysis of working hours/fuel consumption/faults, and large-screen data command.
