Abstracts

The global Agricultural Meteorological Monitoring Station market size is expected to reach \$ 585 million by 2032, rising at a market growth of 8.1% CAGR during the forecast period (2026-2032).

In 2025, global Agricultural Meteorological Monitoring Stations production reached approximately 216,437 units, with an average global market price of around US\$ 1,563 per unit. Gross margin is about 23.5%. The cost is US\$ 1,196 per unit. The production capacity is about 285,317 units. An Agricultural Meteorological Monitoring Station is an environmental monitoring system used in farmland, orchards, greenhouses, pastures, and other agricultural scenarios. It collects real-time meteorological and soil environment data through sensors such as temperature, humidity, rainfall, wind speed and direction, solar radiation, soil temperature and moisture, air pressure, and evaporation sensors. The system typically consists of sensors, a data logger, communication module, power supply system, mounting structure, and cloud-based software platform, providing data support for irrigation management, pest and disease warning, frost warning, crop growth analysis, agricultural disaster prevention, and smart farming decisions.

Agricultural meteorological monitoring stations are expected to evolve toward greater intelligence, connectivity, low-power operation, multi-parameter integration, and data-service capabilities. With the increasing application of IoT, cloud platforms, AI forecasting models, and remote sensing technologies in agriculture, these stations will move beyond simple field data collection and become key data entry points for smart agriculture systems. Future products will place greater emphasis on sensor accuracy, equipment stability, wireless transmission, solar power supply, and remote maintenance, while integrating more deeply with irrigation control, pest and disease

prediction, agricultural machinery scheduling, and agricultural insurance, helping agricultural management shift from experience-based decisions to data-driven decision-making.
