According to our (Global Info Research) latest study, the global Agricultural Mulch Paper market size was valued at USD 88 million in 2022 and is forecast to a readjusted size of USD 109.3 million by 2029 with a CAGR of 3.1% during review period.

At present, research on degradable mulch materials is also making new progress. Degradable mulch films can be mainly divided into several categories: photodegradable plastic mulch films, biodegradable mulch films, photo-biodegradable mulch films, liquid degradable mulch films, and plant fiber mulch films. Among them, plant fiber mulch film basically does not pollute the environment because of its renewable nature, and is considered to be a degradable mulch film with real use value. Regarding plant fiber mulch, currently there are pineapple leaf residues as the main raw material to prepare completely degradable plant fiber mulch, which not only utilizes waste but also makes innovations for sustainable development; there are also hemp fiber as the production material, which is biodegradable. Mulch has become a research hotspot in the field of agricultural environment. It has the advantages of good heat preservation, moisturizing, promoting crop production, degradability, and no pollution. Moreover, the degraded hemp fiber mulch can improve the soil ecological environment and effectively implement the concept of ecological civilization.
