The global Agricultural and Sideline Products Tunnel Dryer market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The tunnel dryer is a self-developed dryer based on absorbing advanced foreign drying technology. It loads materials through a trolley and makes full use of the effective drying space. It is suitable for drying materials of various shapes. The whole machine is divided into several warm and humid bottom sections. The drying medium level of the material passes through the entire drying zone and alternately changes up and down. The heat sources include steam boilers and hot blast stoves (coal, fuel, gas) and are recycled, dehumidified, and the temperature is adjustable. It is more convenient to change the drying process and has wider adaptability.
