Abstracts

The global Agricultural Picking Robot market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The driving forces for the development of agricultural picking robots mainly include the following aspects:

Increased labor costs: Agricultural picking operations often require a large amount of manual labor and often face labor shortages. As labor costs increase, the use of agricultural picking robots can reduce labor costs in the picking process and improve production efficiency.

Improve production efficiency and quality: The use of agricultural picking robots can greatly improve picking efficiency and quality. The robot's precise operation can avoid human errors. At the same time, the robot can also perform 24-hour uninterrupted picking work, which greatly improves production efficiency. In addition, the use of robots can also reduce damage to fruits and vegetables and improve product quality.

Meet food safety and hygiene requirements: The use of agricultural picking robots can avoid artificial contamination and cross-infection and better meet food safety and hygiene requirements. At the same time, robot picking can also reduce damage to plants during picking, reduce the amount of pesticides used, and help protect the environment and ecology.

Technological progress: With the continuous advancement of robotics, sensor technology, image recognition technology and other technologies, the research and development and application of agricultural picking robots are becoming more and more

mature. Technological progress has provided strong support for the development of agricultural picking robots.

Increased market demand: As consumers continue to pay more attention to the quality and food safety of agricultural products, the market demand for agricultural picking robots is also increasing. Consumers are more likely to choose agricultural products picked by agricultural picking robots because they believe that such agricultural products are safer and healthier.
