According to our (Global Info Research) latest study, the global Agricultural Polymer market size was valued at US\$ 7666 million in 2024 and is forecast to a readjusted size of USD 10640 million by 2031 with a CAGR of 4.8% during review period.

Agricultural polymer is a sheet-like material used mainly for mulching, tunnel cultivation, and in-house tunnel cultivation. Because of its weather resistance, agricultural polymer is effective in protecting crops from direct sunlight, cold winds, and rain. Agricultural film sheets can be broadly classified into soft and hard, with agricultural polycaps being classified as soft. Rigid film, on the other hand, is used for roof-type greenhouses.

Because of its versatility and softness, agricultural polymer is used as a versatile agricultural material for small tunnel films, plastic greenhouse curtains, and other applications. It can also be used as a mulching material by covering ridges to prevent weeds, mud splashes, frost protection, heat and moisture retention, and more.
