Agricultural protective fungicides are a type of chemical or biological agent used to prevent plant diseases. They are mainly applied before pathogens infect crops. They effectively prevent diseases by forming a protective barrier on the surface of plants, inhibiting the germination, invasion or initial spread of pathogens. This type of fungicide usually has a broad spectrum, strong contact resistance, and low resistance risk. It is often used in daily disease prevention and control management of fruit trees, vegetables, grain crops and other high-risk crops.
