According to our (Global Info Research) latest study, the global Agricultural Stretch Film for Silage market size was valued at US\$ 786 million in 2025 and is forecast to a readjusted size of US\$ 1091 million by 2032 with a CAGR of 4.8% during review period.

In 2025, global Agricultural Stretch Film for Silage production reached approximately 321.2 K Tons, with an average global market price of around 2377 USD per Ton.

Agricultural Stretch Film for Silage refers to a specialized agricultural polyethylene stretch film used for wrapping silage bales, including grass, alfalfa, haylage, straw and corn stalks. It is designed to provide strong stretchability, cling performance, puncture resistance, UV resistance and airtight sealing, helping create anaerobic fermentation conditions and preserve forage quality during storage.

Agricultural Stretch Film for Silage leverages the unique product characteristics of high barrier sealing, interlayer self-adhesion, puncture resistance, UV resistance, and wide temperature and weather resistance resulting from multi-layer co-extrusion. It effectively addresses the industry pain points of traditional open-air storage and earthen cellar silage, which are susceptible to rainwater, bacteria, and oxygen contamination, leading to mold and spoilage of forage and significant nutrient loss. It also addresses the industry pain points of concentrated forage production but inability to store forage across seasons, resulting in an imbalance in feed supply for livestock throughout the year. Agricultural Stretch Film for Silage helps farms stabilize the quality of silage fermentation and reduce livestock losses caused by forage waste. It is also compatible with mechanized baling and wrapping operations to achieve standardized silage production. As livestock farming scales up and farmers become more aware of cost

reduction and efficiency improvement, it forms the core driver of the industry. Coupled with the continuous expansion of the planting range of high-quality forages such as alfalfa and whole-plant corn, and the steady increase in the popularity of commercially wrapped silage, the entire industry chain is steadily expanding from top to bottom.

The upstream raw materials for Agricultural Stretch Film for Silage mainly include linear low-density polyethylene (LLDPE) and mLLDPE. Typical raw material suppliers include Dow Inc., SABIC, LG Chem, and China National Petroleum Corporation. The downstream application is mainly in the silage of forage. Typical downstream customers include Dairy Farmers of America, Fonterra Co-operative Group, Arla Foods, FrieslandCampina, Mengniu, and Yili.

The single-line production capacity of Agricultural Stretch Film for Silage is greatly affected by factors such as film width, thickness, number of layers, line speed, roll changing efficiency, order specification switching, and operating rate, typically ranging from several thousand to tens of thousands of tons. The industry's gross profit margin is usually in the range of 20%-30%.
