According to our (Global Info Research) latest study, the global Agricultural Super Absorbent Polymer market size was valued at US\$ 178 million in 2025 and is forecast to a readjusted size of US\$ 278 million by 2032 with a CAGR of 6.6% during review period.

Agricultural super absorbent polymers are water-retaining materials designed to enhance soil moisture retention and improve water efficiency in agricultural practices. These polymers can absorb and retain large amounts of water, releasing it slowly to the surrounding soil, thereby reducing irrigation frequency and promoting plant growth. SAPs are particularly beneficial in arid regions or during drought conditions, as they help maintain soil moisture levels, improve crop yields, and minimize water runoff. Additionally, these polymers can enhance soil structure and nutrient availability, making them a valuable tool for sustainable agriculture.
