Abstracts

The agricultural vehicle automatic driving system is an automatic driving system based on high-precision satellite navigation and positioning information, combined with sensors, and then uses algorithms to control agricultural machinery. Its core key technologies mainly include high-precision positioning technology relying on satellite navigation systems such as GPS and Beidou Positioning System, as well as sensors that sense the status and angle of agricultural machinery.

Autonomous driving systems for agricultural vehicles have many advantages. For example, it can realize the automatic driving of the tractor accurately according to the preset route, and the operating accuracy can reach about $\pm 2.5\text{cm}$, thus improving the quality and efficiency of the operation. In addition, since there is no need to rely on the driver's driving experience, the driver's labor intensity is reduced and the technical requirements are relatively low, which helps to extend the operation time, reduce production costs, and increase land utilization efficiency.

According to our (Global Info Research) latest study, the global Agricultural Vehicle Automatic Driving System market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.
