Abstracts

An agricultural vehicle radial tire is a tire that the body plies run radially across the tire, perpendicular to the circumference of the tire. That allows the tire to flex more and permits a bigger footprint. A radial tire (more properly, a radial-ply tire) is a particular design of vehicular tire. In this design, the cord plies are arranged at 90 degrees to the direction of travel, or radially (from the center of the tire).

According to our (Global Info Research) latest study, the global Agricultural Vehicle Radial Tire market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.
